Editor's Feature

Artificial intelligence is changing how people think, work, and communicate. When society changes, language follows. The following original terms are proposed to describe common AI-era experiences that currently lack concise everyday words.

Promnesia

Definition: Forgetting how to perform a task because AI always does it.

Word Formation: Prompt + Amnesia

Example: I have promnesia for spreadsheet formulas now.

Synthust

Definition: The uncertainty of not knowing whether content is human-made or AI-generated.

Word Formation: Synthetic + Trust

Example: This image gives me synthust.

AImprint

Definition: The subtle influence AI leaves on your thinking or writing style.

Word Formation: AI + Imprint

Example: My essays have a noticeable AImprint.

Ghostdraft

Definition: An AI-produced first draft later refined by a human.

Word Formation: Ghostwriter + Draft

Example: I started with a ghostdraft.

Promptlock
Definition: Being stuck trying to invent the perfect AI prompt.

Word Formation: Prompt + Block

Example: I'm in promptlock again.

Replylag
Definition: Delaying a reply while asking AI to rewrite it.

Word Formation: Reply + Lag

Example: Sorry for the replylag.

Mindsync
Definition: When AI expresses exactly what you meant.

Word Formation: Mind + Sync

Example: That answer was complete mindsync.

Botblind
Definition: Assuming everything online was made by AI.

Word Formation: Bot + Blind

Example: People are becoming botblind.

Authenix
Definition: The desire to verify that something is authentically human.

Word Formation: Authentic + coined suffix

Example: People value authenix.

Cogshift
Definition: A lasting change in thinking caused by daily AI use.

Word Formation: Cognition + Shift

Example: AI caused a major cogshift.

Closing Note
Whether these words become part of everyday speech depends on adoption by communities, creators, and social media. Every established word was once new; the next generation of AI may inspire an entirely new vocabulary.
